

What type of questions can we ask from the dataset?

Clarifying Questions:

1. During **which** months/time period the rate of infection is the highest?
2. **What** percentage of total vulnerable population was affected during Influenza season in recent years?
3. **Does** the flu season begin during the same month every year or does it vary?
4. **How** many medical personals do we have that we need to deploy?
5. **What** is the average number of days a patient stays in a hospital?
6. **Which** months record the lowest number of infections?
7. **What** is the total flu-shots given before the flu season?
8. **What** percentage of patients admitted in the hospital received flu shots before the flu season?

Funnelling Questions:

Clarifying Question: During which months the rate of infection is the highest?

1. **Are** the months during which the rate of infection is highest the same for each state?
2. **Does** the length of duration of highest rate of infection varies for each state?
3. **Which** states have the highest infection rate with highest total vulnerable population?

Privacy and Ethics:

1. Is this data set publicly available?
2. Are there laws governing the use of these data set?
3. If these datasets are collected from hospitals, were they informed of the use case policy of the data set?
4. For which purposes these datasets cannot be used?
5. How are we protecting the privacy of the data?
